

T-Gloss Instructions

A customization business is nothing without the right accessories. One of those key accessories is finishing sheets.

Used to create a glossy appearance to printed transfers, T-Gloss sheets can be used as an alternative instead of standard finishing sheets during the post-press. This is a great option for those customers who like more of a shiny look to their completed transfers and garments. It's also used to help with the stretchability of transfers.

T-Gloss paper is available in sizes 8.5" x11" and 11" x17".

Once you've completed your transfer, you simply press the T-Gloss over your transfer and press!

Below, we've provided some instructions on how to achieve the best results when using T-Gloss.

- 1** Press and peel your transfer according to the instructions for the transfer paper you are using.

- 2** For the final press, use the glossy side toward the transfer and press for 5-8 seconds with medium to heavy pressure at 360° F.

- 3** This will be a COLD peel, so be sure to move the garment off the heat press and over to the side to cool off.

- 4** Gently Peel the T-Gloss paper off.

DO NOT:

- Cut the sheet in any way. The rubber film will come off.
- Use CP Toner (toners used in older printers, if you have a newer Uninet or OKI you are good) - yellow pigments will migrate to the rubber film.
- Use with Sublimation inks or toners.
